COMPANY 2021 SECONDARY DISTRIBUTOR PERMITS DUE NOW!

Companies that purchase and/or import regulated refrigerants and any new or used HVACR or air conditioning parts connected to the closed refrigerant loop of a system (see MR 103/94 or MOPIA's Purchasing Bulletin and Regulated Products Bulletin) must obtain a Secondary Distributor Permit annually via MOPIA. The annual permit cost is \$50 (currently) and upon receiving approval will be issued a Permit with a designated number allowing the company to purchase/acquire regulated products. Contact MOPIA or visit our website for details.

CARRIER AIDS IN VACCINE DISTRIBUTION CHAIN

With the on-going global challenges of Covid-19 and the introduction of vaccines with strict cold temperature storage and distribution requirements, Carrier Global Corporation is one of potentially many partners in assisting the cold chain distribution.

Their transportation Pods will be used in some instances to assist in the transport and storage of the vaccine going forward. Temperature sensors will be used to monitor temperatures down to -95C.

See more details at: www.carrier.com/container-refrigeration/en/worldwide/news/news-article/seacube_acquires_200_carrier_pods_monitored_by_sensitech_to_help_meet_global_vaccine_distribution_needs.html

Canada's Federal Economic Update Allocates Funds for Energy Efficiency in Homes

In Canada's Fall Economic Update, November 30, 2020, \$2.6 billion over 7 years was dedicated to home energy efficiency.

700,000 grants up to \$5,000 each will aim to assist homeowners make energy efficient improvements.

See details at: <https://budget.gc.ca/fes-eea/2020/report-rapport/FES-EEA-eng.pdf>

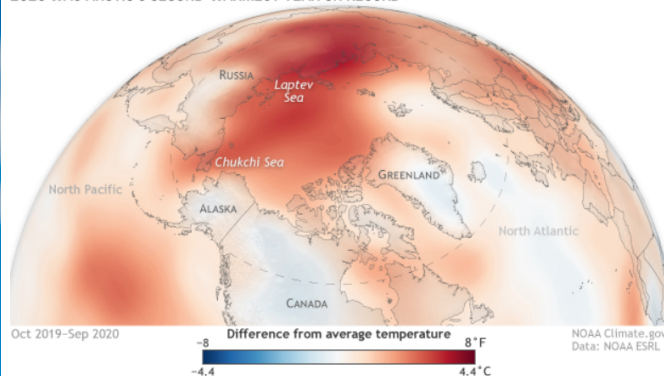

CERTIFICATION TRAINING AVAILABLE ON-LINE

MOPIA continues to offer certification training on-line. The certification is required by anyone working on the gas side of any HVACR and/or air conditioning systems.

Details can be found at:

www.mopia.ca under "Training"

2020 WAS ARCTIC'S SECOND-WARMEST YEAR ON RECORD

NOAA 2020 ARCTIC REPORT CARD

NOAA reported on the Arctic's environmental conditions and it highlights a significant deviation to weather, climate, oceanic and land conditions.

Sea ice was the 2nd lowest since 1900, but phytoplankton productivity was much higher. See more charts and details directly from NOAA at:
