

The nine hydrofluorocarbons (HFCs) listed in Table 1 are currently subject to the Significant New Activity (SNAc) provisions under the *Canadian Environmental Protection Act* (CEPA). Environment and Climate Change Canada applied the SNAc provisions in order to gather information and assess the potential environmental and human health risks associated with new activities involving these HFCs. Since these HFCs are now subject to the permitting and reporting system provisions under the *Ozone-depleting Substances and Halocarbon Alternatives Regulations*, the SNAc requirements on these HFCs are no longer necessary. As a result, the SNAc requirements will be considered for rescission. The current SNAc requirements remain in effect until any rescissions or variations come into force.
